

# Why study this intersection?

- Creating safe and well-operating intersections is a top priority for Lake County. Congestion results in driver frustration and can contribute to crashes.
- Based on a review of crash data and traffic demand, the Fairfield Road / Monaville Road intersection has been identified for possible improvements.

## What will be studied?

- This study will take an in-depth look at the current and future needs at this intersection and develop solutions to improve safety and traffic operations.
- The type of intersection solution has not yet been decided. Lake County Division of Transportation will evaluate the options of a traffic signal, roundabout or a “no build” scenario.
